EVENT ON REPORT

DISASTER REDUCTION DAY

Disaster Risk Reduction (GAR) is informed by the latest Data I-Including Sendai Framework target reporting by countries using the Sendai Framework Monitor – and infers early lessons on the state of the global disaster risk landscape. While the observed period is still too short to reach definitive conclusions at a global scale, it is possible to ascertain certain patterns in terms of magnitude, geographic and socioeconomic distribution of impacts and abstract several points of departure for where and how countries have seen successes in reducing risk.

In terms of losses, severe inequalities between low-and high –income countries persist. With the lowest-income countries bearing the greatest relative costs of disasters, human losses and asset losses relative costs of disasters. Human losses and asset losses relative to gross domestic product tend to be higher in the countries with the least capacity to prepare, Finance and respond to disasters and climate change, such as Small Island Developing States.

Disaster Reduction Day was conducted on 13th October 2017; behalf of this programme Drawing Competition was conducted to our students. They have expressed their through on Global Warming, Tsunami, Floods, Volcano erection, impacts etc. Our students were participated in this completion and got the prize.
